

A better recycled scuff solution.

Lightweight. Easy to handle. Fiberglass-reinforced. Cost-effective.

US Liner raises the bar again on performance, strength and durability with **Bad Wolf Scuff™**.

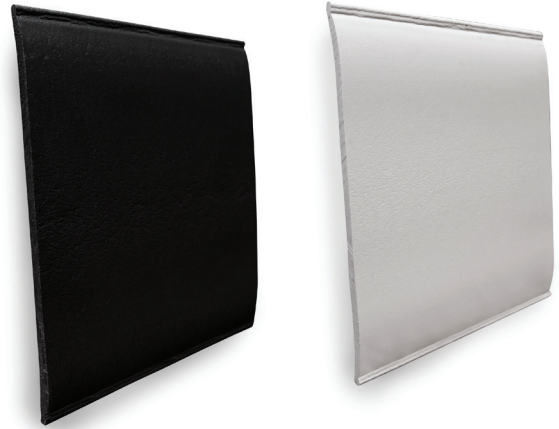

Made from recycled **Versitex** and **Bulitex**, this new fiberglass-reinforced scuff liner is a better alternative to 5/8-inch HPDE (polyscuff) solutions.

Applications:

Bad Wolf Scuff is an easy-to-install, durable and cost-effective alternative to traditional 5/8-inch polyscuff material. It is ideally suited for dry vans and reefers. Available in both coil and flat forms in standard 12-inch and 24-inch widths. Available for OEM specification or field installed for maintenance and repair.

Product Advantages:

- > 3/8-inch thickness – provides more cargo room.
- > Lightweight – easy to handle.
- > Glass-reinforced – recycled from field-proven **Bulitex** and **Versitex** for superior thermal stability. Remains flat through all temperature fluctuations.
- > Integral side-wall protection – rounded bevel at the top prevents pallets from snagging and damaging the sidewall.
- > Smooth, flat surface available in white or black at no additional charge.
- > Excellent impact strength.
- > Easy installation – resists bowing, relaxes quickly and requires fewer fasteners.

TECHNICAL DATA:

Property	Units	Test Method
Flexural Modulus	1063 MPa	ASTM D790-10
Flexural Strength	29 MPa	ASTM D790-10
Max Load	5785 N	ASTM D790-10
Nominal Weight	1.75 lbs/sf	
Standard Width	12", 24"	
Standard Thickness	3/8"	
Length	52 LF	
Color	White or Black	
Packaging	Flat or Coil
